Magnevist Injection

Magnevist (brand of gadopentetate dimeglumine) injection is the N-methylglucamine salt of the gadolinium complex of diethylenetriamine pentaacetic acid, an injectable contrast medium for magnetic resonance imaging (MRI) to be administered by intravenous injection. Each mL contains 469.01 mg gadopentetate dimeglumine, 0.39 mg meglumine, 0.15 mg diethylenetriamine pentaacetic acid and water for injection. A clear, colorless to slightly yellow solution which contains no antimicrobial preservative.

Gadavist

Gadavist™(gadobutrol) injection is a gadolinium-based contrast agent indicated for intravenous use in diagnostic magnetic resonance imaging (MRI) in adults and children (2 years of age and older) to detect and visualize areas with disrupted blood brain barrier (BBB) and/or abnormal vascularity of the central nervous system.

Ultravist® Injection

Ultravist Injection is available as a stable, ready-to-use aqueous solution of iopromide in vials or bottles in concentrations of 240, 300, and 370 mg iodine per mL. As a proven X-ray contrast medium, Ultravist has a broad range of indications for intra-arterial procedures and intravenous procedures.

ProHance® Contrast Medium

ProHance® (gadoteridol) is a contrast medium for magnetic resonance imaging (MRI) in the form of a sterile, apyrogenic solution for intravenous injection. In MRI, ProHance® provides contrast enhancement of the brain, spine and surrounding tissues, resulting in improved visualization (compared with unenhanced MRI) of lesions with abnormal vascularity or those thought to cause a disruption of the normal blood-brain barrier. ProHance® can also be used for whole-body MRI, including the head, neck, liver, breast, musculoskeletal system, and soft tissue pathologies.

MultiHance® Contrast Agent

MultiHance® (gadobenate dimeglumine) is a paramagnetic MRI contrast agent. The paramagnetic gadolinium ion is complexed with gadobenate, a chelating agent that forms a highly stable coordinating sphere around the godolinium ion. It is salified with meglumine, forming a 0.5 M solution. MultiHance is endowed with all the physicochemical features typical of gadolinium class compounds, but in addition it has outstanding relaxivity properties.

Optiray® 240 Injectable

Nonionic, low-osmolar contrast media agent intended for intravascular administration. Therapeutically and biologically inert when injected into body for use in organ or tissue enhancement in CT, X-ray, and fluoroscopy imaging procedures. Indicated for use in adults for angiography throughout the cardiovascular system. Uses include cerebral, coronary, peripheral, visceral, and renal arteriography, venography, aortography, left ventriculography, CT of head and body, and pediatric excretory urography. Not for intrathecal use. Each mL contains 509 mg of ioversol, 3.6 mg of tromethamine as a buffer, & 0.2 mg of edetate calcium disodium as a stabilizer.

Optiray™ 300 Injectable Contrast Agent

Optiray™ 300 contrast agent is a non-ionic, low osmolar, lower viscosity injectable and intended for intravascular administration. It is a prescription drug that is intended to be therapeutically and biologically inert when injected into the body for use in organ or tissue enhancement in CT, X-ray and fluoroscopy imaging procedures for which it is approved. Each mL of Optiray™ 300 contrast agent contains 636 mg of ioversol, 3.6 mg of tromethamine as a buffer and 0.2 mg of edetate calcium disodium as a stabilizer.

Optiray™ 350 Injectables

Nonionic, low-osmolar contrast media agent intended for intravascular administration. Therapeutically and biologically inert when injected into body for use in organ or tissue enhancement in CT, X-ray, and fluoroscopy imaging procedures. Indicated for use in adults for angiography throughout the cardiovascular system. Uses include cerebral, coronary, peripheral, visceral, and renal arteriography, venography, aortography, left ventriculography, CT of head and body, and pediatric excretory urography. Not for intrathecal use. Each mL contains 741 mg of ioversol, 3.6 mg of tromethamine as a buffer, and 0.2 mg of edetate calcium disodium as a stabilizer.

The **preferred** colonic transit diagnostic test

Reliably and economically diagnose GI conditions such as chronic constipation, colonic inertia, hypomotility, outlet delay, and bowel obstruction.

Available in three shapes:

O-Ring (#8100) | Tri-Chamber (#8100-24TC) | Double D (#8100-24DD)

Two Easy Testing Methods:

The **Simple Sitzmarks Method** helps detect a blockage or colonic inertia in chronically constipated patients by tracking O-rings in the colon.

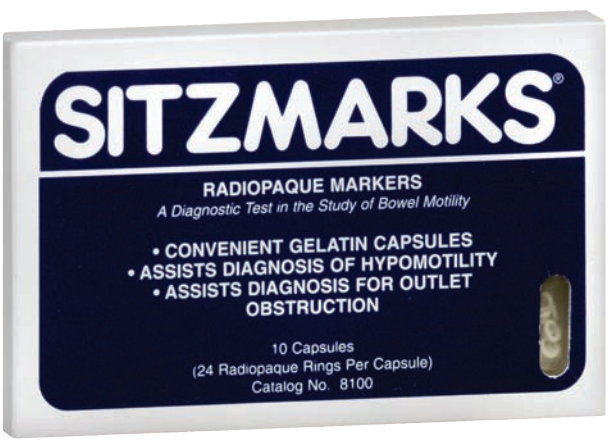
The **Segmental Sitzmarks Method** uses all rings to help determine the amount of time that it takes food to pass through each section of the colon.

KONSYL

SITZMARKS®
RADIOPAQUE MARKERS
Colonic Transit Time Test

available through HENRY SCHEIN®

From Konsyl Pharmaceuticals – manufacturer of the #1 doctor-recommended, all-natural psyllium fiber.



Sitzmarks® Radiopaque Markers

A simple, reliable, and affordable method of diagnosis for many gastrointestinal (GI) conditions, including chronic constipation, colonic inertia, hypomotility, outlet delay, and bowel obstruction. This unique colonic transit diagnostic test helps professionals select the best therapeutic option for adult patients with severe constipation who have otherwise negative GI evaluations.

Ready-Box™ Contrast Media Warmer

Made of lightweight aluminum. The transparent plastic front door, compartmentalized shelves and partitions allow easy access, visibility and flexible storage of contrast media boxes, vials, and bottles. The key lock limits access to help ensure security of the contents, and the open coil heater aids even heat distribution.

BD

BD™ Nexiva™ Closed IV Catheter System

Closed IV catheter system for peripheral access. Reduces life-threatening exposure while enhancing IV therapy success and clinical outcomes.

Features and benefits:
- No blood exposure or blood mess
- Built-in stabilization platform to secure the catheter
- BD Vialon™ biomaterial: proven catheter material to reduce IV therapy complications
- BD Instaflash™ needle technology designed to improve first-stick success
- Includes BD Q-syte, proven to reduce catheter blood-stream infections
- All integrated parts simplify the IV therapy process
- Reduces contamination at the IV site
- Larger bore extension tubing for higher flow rates

KONICA MINOLTA

Nothing Makes Your Transition To Digital Easier

ALL-IN-ONE DESIGN

ImagePilot exemplifies the true meaning of an integrated digital radiography system. It combines patient registration, CR acquisition, distributed workflow, image review, and long-term storage in one easy-to-use and maintain system. These advanced features meet private practice workflow needs and eliminate the need for a separate PACS.

Standard ImagePilot Features:

- All-In-One Design—Easiest for the staff to learn. Reduces IT support requirements.
- AutoPilot—Automatic image processing for unsurpassed consistency in image quality.
- Simplified Image Acquisition—Single click workflow increases productivity.
- Same User Interface At Every Workstation—learn only one system.
- Easy-To-Use And Feature Rich Viewing Screen—Image adjustments, annotations, measurements, inputs and outputs, customizable for basic to advanced users.

ImagePilot

ImagePilot Sigma Highlights:

- REGIUS Sigma Tabletop CR Reader
  —25 or 45 cassettes per hour
  —Flexible plate technology for compact design and cost-effectiveness
- Small 20"W x 24"D x 14"H
- Lightweight—under 70 pounds
- Reliable—very few replacement parts
- Touch Screen capable—easy operation
- Informity ready!

ImagePilot LS Highlights:

- Rapid Output Speed—40 cassettes per hour.
- Redundant Storage—mirrored 500GB hard drives (RAID 1)
- Distribute Workflow with Multiple Users—Two additional licenses (3 total including the server).
- Import Priors or Export Patient Images to CD—Better than film for transportability and viewing.

PACS SOLUTIONS FOR EVERY PRACTICE

Feature-Rich PACS– Affordable Solution for Your Practice

Enjoy the benefits of the web-based MXReview PACS paired with the modality of your choice. MXReview PACS solution provides your practice with the technology to optimize workflow at an affordable price.

The scalable software allows users to have the sophisticated tool-sets of an enterprise-level while also providing a sub-set of optional features for a customized fit. The software includes tools for technologists QC as well as a full featured web viewer.

Workflow Your Way

MXReview PACS caters to practices of all sizes. Avoid overspending by customizing your solution's features and functionalities based on your facilities size, needs, and budget.

MXReview PACS solution follows medical standards for DICOM, IHE, and HL7. The PACS seamlessly integrates with any third party vendor RIS, EMR, and Practice Management software.

No matter what the size or type of facility, MXReview can be hand tailored for the most cost effective, workflow driving, business solution.

Xact® Extremity Ring Markers

The 15-mm markers are perfect for marking areas of interest on hands, arms, and feet. They create a clear and easy-to-see circular indicator of known 15-mm diameter. The 10-mm markers are perfect for indicating areas of interest in the fingers and toes. Many facilities use them to mark problematic screws and other hardware prior to surgery, and to identify areas of digital pain.

- Designed for X-rays of bone such as in the hands and feet
- Are easy to use; just peel and stick the self-adhering backing to the patient and take multiple view radiographs.
- Used in podiatry, orthopedics, plastic surgery, and emergency departments
- Lead-free and latex-free
- Thin, flexible, and highly conforming
- Hypoallergenic adhesive—they won't fall off
- Convenient and environmentally friendly dispenser box

PTC Compliance Training Partners

Luxel®+ X-ray Monitoring Badges

Experts agree that there is no safe level of radiation. Even the smallest dose may cause cancer and genetic damage. Any health care facility may be exposing staff to unsafe levels of radiation. That's why accurately measuring and recording radiation exposure over the long term is important for your people and your practice. The Landauer Luxel Plus with state-of-the-art Optically Stimulated Luminescence (OSL) technology, has the highest sensitivity available today—10 times the sensitivity of film badges!

Features include:

- Fastest reporting in the industry—5-day average turnaround
- A lifetime exposure record is archived for safekeeping
- Personalized badges
- Web-based reporting
- Automatic renewal program

Kodak

Kodak Ektavision® G and L Extraoral Film–Panoramic

Get low-crossover technology that captures crisp radiographic detail with both. Ideal for panoramic and cephalometric radiographs, TMJ cases, implant procedures, and more. Both feature 400-speed film system that minimizes radiation exposure. Ektavision G Extraoral Film: Kodak's sharpest extraoral film to visualize maximum amount of radiographic information for diagnosis. Panoramic radiographs taken with films like this may even assist in detection of calcifications in carotid arteries, a possible predictor of heart attack or stroke. Ektavision L Extraoral Film: low-contrast, wide-latitude film. Ideal tool for enhancing soft tissue visualization for CT and cephalometric radiographs. Process both films automatically or manually, and use current cassettes with Kodak Ektavision or Lanex Regular screens.

medlink IMAGING

Radiomat™ SG™ Full Speed Orthochromatic Film

This film provides high contrast and excellent detail throughout the entire diagnostic range and rapid processing. This medium speed, high contrast film is compatible with any green-emitting rare-earth intensifying screen. When used with 400-speed green rare-earth screens, images have high clarity, high contrast, and overall image sharpness. When used with 100-speed green rare-earth screens, the film provides outstanding detail in extremity images. All come in a non-interleaved, reclosable box.

Solutek SDX Concentrate Developer and Fixer

These are single-solution concentrates for manual processing of all brands and types of medical X-ray films. The special one-part formulations are easy to mix and eliminate the need for mixing of multiple chemical parts, lessening the possibility of mixing errors. SDX Developer produces highest speed and contrast, plus low base and fog. Clean-working over a wide range of temperatures, it is environmentally friendly and contains no boron. SDX Fixer contains hardener. It is noncorrosive, and rapidly clears and hardens all X-ray films. Resists formulation of sludges.

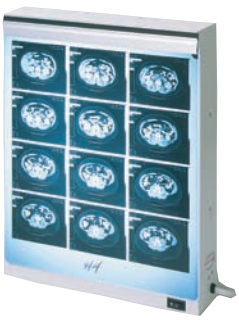
InSight X-ray Illuminator

This illuminator utilizes LCD technology, providing an X-ray viewbox with a uniquely even light surface in a super-thin cabinet. Just 2" deep, it gives the look of a recessed unit without the hassle of cutting holes in the wall. The panel accommodates one 14" x 17" X-ray. The auto switch activates the viewing area when the films are inserted, and has a manual on/off switch as well.

21"L x 20.25"W x 1.6"D

(106-8228) .....ea



Econoline Illuminators

18⅛"H x 3"D

These economical illuminators have a 14" x 17" viewing area per unit, and are 3" thick, making them unobtrusive when hung on walls. They feature 2-bulb illumination (15 W each), 1,713 candela per square meter (bulbs are included with unit), baked-on white polyurethane finish, Magic Grip film retainer, and 8' line cord with 3-prong plug.

Single Unit, 14⅛"W

HOLOGIC®

Henry Schein offers the complete line of Bone Densitometers from Hologic®.

Studies show 55% of women over 50 have osteoporosis or low bone mass. If you had the capability to test patients in a matter of minutes, how many patients could be tested per day?

Bone Density testing is safe, noninvasive and easy to do in your office. Great reimbursement rates make osteoporosis assessment very attractive and important for your patient care.

Your Henry Schein Sales Consultant can schedule our Imaging Equipment Specialist to help you evaluate bone density testing.

New from

HENRY SCHEIN® MEDICAL

SCANORA® 3D

The in-office Cone Beam CT system for ENT physicians and surgeons.

Short scan times from 10 to 26 seconds and effective exposure times from 2.25 to 6 seconds have the benefits of saving patient dose. Together with the integrated motorized seat and the rigid patient support, they increase the patient comfort and the diagnostic performance of the **SCANORA® 3D** system.

System highlights

- Stable seated patient
- Fully motorized chair
- 90 kV, 4–12.5 mA, pulsed X-ray generation
- Scan time 10 to 26 seconds
- Reconstruction time shorter than 1 minute
- Isotropic voxel size ranging from 0.133 to 0.35 mm
- 12" HD ClearTouch Panel
- Compatible with leading navigation systems
- DICOM/PACS compatibility
- Small footprint (2.24 m^2)
