* *Hyalenex* recombinant is the only FDA-approved hyaluronidase.

** Cost comparison based on published Wholesale Acquisition Cost per single-use vial comparing available FDA-approved products. Red Book December 2012. Price comparison is not indicative of final customer price and is not intended to be a comparison of safety or efficacy of drugs.

† IMS Monthly Hyaluronidase Market Share (January 2012 through January 2013).

Indication

Hyalenex recombinant (hyaluronidase human injection) is a tissue permeability modifier indicated as an adjuvant in subcutaneous fluid administration for achieving hydration, to increase the dispersion and absorption of other injected drugs, and in subcutaneous urography for improving resorption of radiopaque agents.

Important Safety Information

- Hypersensitivity to hyaluronidase or any other ingredient in the formulation is a contraindication to the use of this product.
- Discontinue *Hyalenex* recombinant if sensitization occurs.
- Hyaluronidase should not be used to enhance the absorption and dispersion of dopamine and/or alpha agonist drugs.
- Hyaluronidase should not be injected into or around an infected or acutely inflamed area because of the danger of spreading a localized infection.
- Hyaluronidase should not be used to reduce the swelling of bites or stings.
- Hyaluronidase should not be used for intravenous injections because the enzyme is rapidly inactivated.
- Furosemide, the benzodiazepines and phenytoin have been found to be incompatible with hyaluronidase.
- Anaphylactic-like reactions following retrobulbar block or intravenous injections have occurred, rarely.
- Hyaluronidase should not be applied directly to the cornea. It is not for topical use.

The most frequently reported adverse reactions have been local injection site reactions, such as erythema and pain. Hyaluronidase has been reported to enhance the adverse reactions associated with co-administered drug products.

Patients receiving large doses of salicylates, cortisone, ACTH, estrogens or antihistamines may require larger amounts of hyaluronidase for equivalent dispersing effect, since these drugs apparently render tissues partly resistant to the action of hyaluronidase.

Edema has been reported most frequently in association with subcutaneous fluid administration. The rate and volume of subcutaneous fluid administration should not exceed those employed for intravenous infusion. As with all parenteral fluid therapy, observe effect closely, with the same precautions for restoring fluid and electrolyte balance as in intravenous injections. Special care must be taken in pediatric patients to avoid over hydration by controlling the rate and total volume of infusion. When solutions devoid of inorganic electrolytes are administered subcutaneously, hypovolemia may occur.

Hyalenex recombinant contains albumin, which is a derivative of human blood that may carry a remote risk of transmitting infectious agents, e.g., viruses and theoretically, the Creutzfeldt-Jakob disease (CJD) agent. No cases of transmission of viral diseases, CJD, or variant CJD (vCJD) have ever been identified for licensed albumin or albumin contained in other licensed products.

See Brief Summary of Full Prescribing Information on following page.

HYLENEX® recombinant
(hyaluronidase human injection)
150 USP units/mL
Rx Only

BRIEF SUMMARY OF FULL PRESCRIBING INFORMATION

This Brief Summary does not include all the information needed to use HYLENEX recombinant safely and effectively. See full prescribing information for HYLENEX recombinant by visiting www.hylenex.com.

To report SUSPECTED ADVERSE REACTIONS, contact Halozyme Therapeutics, Inc. at 1-877-877-1679 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

INDICATIONS AND USAGE

Subcutaneous Fluid Administration

HYLENEX recombinant is indicated as an adjuvant in subcutaneous fluid administration for achieving hydration.

Dispersion and Absorption of Injected Drugs

HYLENEX recombinant is indicated as an adjuvant to increase the dispersion and absorption of other injected drugs.

Subcutaneous Urography

HYLENEX recombinant is indicated as an adjunct in subcutaneous urography for improving resorption of radiopaque agents.

CONTRAINDICATIONS

HYLENEX recombinant is contraindicated in patients with known hypersensitivity to hyaluronidase or any of the excipients in HYLENEX recombinant. A preliminary skin test for hypersensitivity to HYLENEX recombinant can be performed. The skin test is made by an intradermal injection of approximately 0.02 mL (3 Units) of a 150 Unit/mL solution. A positive reaction consists of a wheal with pseudopods appearing within 5 minutes and persisting for 20 to 30 minutes and accompanied by localized itching. Transient vasodilation at the site of the test, i.e., erythema, is not a positive reaction. Discontinue HYLENEX recombinant if sensitization occurs.

WARNINGS AND PRECAUTIONS

Spread of Localized Infection

Hyaluronidase should not be injected into or around an infected or acutely inflamed area because of the danger of spreading a localized infection. Hyaluronidase should not be used to reduce the swelling of bites or stings.

Products Containing Plasma-derived Albumin

This product contains albumin, a derivative of human blood. Based on effective donor screening and product manufacturing processes, it carries an extremely remote risk for transmission of viral diseases and variant Creutzfeldt-Jakob disease (vCJD). There is

a theoretical risk for transmission of Creutzfeldt-Jakob disease (CJD), but if that risk actually exists, the risk of transmission would also be considered extremely remote. No cases of transmission of viral diseases, CJD, or vCJD have ever been identified for licensed albumin or albumin contained in other licensed products.

Ocular Damage

Hyaluronidase should not be applied directly to the cornea. It is not for topical use.

Enzyme Inactivation with Intravenous Administration

HYLENEX recombinant should not be administered intravenously. Its effects relative to dispersion and absorption of other drugs are not produced when it is administered intravenously because the enzyme is rapidly inactivated.

ADVERSE REACTIONS

The following adverse reactions have been identified during post-approval use of hyaluronidase products. Because these reactions are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to drug exposure.

The most frequently reported adverse reactions have been mild local injection site reactions such as erythema and pain. Hyaluronidase has been reported to enhance the adverse reactions associated with co-administered drug products. Edema has been reported most frequently in association with subcutaneous fluid administration. Allergic reactions (urticaria or angioedema) have been reported in less than 0.1% of patients receiving hyaluronidase. Anaphylactic-like reactions following retrobulbar block or intravenous injections have occurred, rarely.

DRUG INTERACTIONS

It is recommended that appropriate references be consulted regarding physical or chemical incompatibilities before adding HYLENEX recombinant to a solution containing another drug.

Incompatibilities

Furosemide, the benzodiazepines and phenytoin have been found to be incompatible with hyaluronidase.

Drug-Specific Precautions

Hyaluronidase should not be used to enhance the dispersion and absorption of dopamine and/or alpha agonist drugs. When considering the administration of any other drug with hyaluronidase, it is recommended that appropriate references first be consulted to determine the usual precautions for the use of the other drug.

Local Anesthetics

When hyaluronidase is added to a local anesthetic agent, it hastens the onset of analgesia and tends to reduce the swelling caused by local infiltration, but the wider spread of the local anesthetic solution increases its absorption; this shortens its duration of action and tends to increase the incidence of systemic reaction.

Salicylates, Cortisone, ACTH, Estrogens and Antihistamines

Patients receiving large doses of salicylates, cortisone, ACTH, estrogens or antihistamines may require larger amounts of hyaluronidase for equivalent dispersing effect, since these drugs apparently render tissues partly resistant to the action of hyaluronidase.

USE IN SPECIFIC POPULATIONS

Pregnancy

Pregnancy Category C. In an embryo-fetal study, mice have been dosed daily by subcutaneous injection with recombinant human hyaluronidase at dose levels up to 2,200,000 U/kg. The study found no evidence of teratogenicity. Reduced fetal weight and increased numbers of fetal resorptions were observed, with no effects found at a daily dose of 360,000 U/kg, which represents several orders of magnitude over the suggested human dose range of 50-300 U of HYLENEX recombinant (0.8-5 U/kg in a 60 kg subject). In a pre- and postnatal development study, mice have been dosed daily by subcutaneous injection with recombinant human hyaluronidase at dose levels up to 1,100,000 U/kg. The study found no adverse effects on sexual maturation, learning and memory of offspring, or their ability to produce another generation of offspring. It is also not known whether HYLENEX recombinant can cause fetal harm when administered to a pregnant woman. HYLENEX recombinant should be given to a pregnant woman only if clearly needed.

Labor and Delivery

Administration of hyaluronidase during labor was reported to cause no complications: no increase in blood loss or differences in cervical trauma were observed.

Nursing Mothers

It is not known whether hyaluronidase is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when hyaluronidase is administered to a nursing woman.

Pediatric Use

Clinical hydration requirements for children can be achieved through administration of subcutaneous fluids facilitated with HYLENEX recombinant. The dosage of subcutaneous fluids administered is dependent upon the age, weight, and clinical condition of the patient as well as laboratory determinations. The potential for chemical or physical incompatibilities should be kept in mind. The rate and volume of subcutaneous fluid administration should not exceed those employed for intravenous infusion. For premature infants or during the neonatal period, the daily dosage should not exceed 25 mL/kg of body weight, and the rate of administration should not be greater than 2 mL per minute. During subcutaneous fluid administration, special care must be taken in pediatric patients to avoid over hydration by controlling the rate and total volume of the infusion.

Geriatric Use

No overall differences in safety or effectiveness have been observed between elderly and younger adult patients.

DRY EYE PRODUCTS

Soft Plug® Silicone Punctum Plugs

- 0.4mm (992-3573)
- 0.5mm (156-5261)
- 0.6mm (648-9672)
- 0.7mm (920-9561)

Soft Plug® Extended Duration Absorbable Plugs

These long-lasting plugs are effective and economical for transient dry-eye symptoms following surgery. Provide patient comfort for up to 3 months.

- 0.3mm (305-7146)
- 0.4mm (648-2082)
- 0.5mm (418-5592)

Soft Plug® Collagen Plugs

Collagen intracanalicular plugs with a smooth proprietary finish that simplifies insertion of the plug. They are ideal for short-term, diagnostic, and postsurgical occlusion. Plugs are 2mm in length and absorbable within 2–5 days.

- 0.2mm Diameter (448-2055)
- 0.3mm Diameter (648-5994)
- 0.4mm Diameter (361-1792)

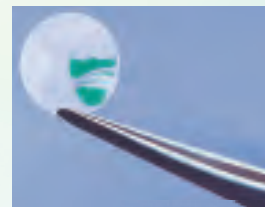

Contains: 2 inserters & 10 trays of 2 plugs each. Trays are equipped with an alignment slot for quick loading.

Soft Shield Collagen Corneal Shields

Provide ocular comfort, lubrication, and protection following surgery, traumatic corneal abrasions, and nontraumatic corneal conditions. Available in the widest range and the most consistent, accurate dissolution times.

- Quick Shield 10/Box
- 12-Hour Dissolution Time (648-3061)
- 24-Hour Dissolution Time (951-5522)
- 72-Hour Dissolution Time (104-7389)

HEALTH CARE GUIDELINES AND PERSONAL PROTECTIVE APPAREL

The Association for Professionals in Infection Control and Epidemiology (APIC) Standard Precautions:

Wear a gown to protect skin and to prevent soiling of clothing during procedures and patient-care activities that are likely to generate splashes or sprays of blood, body fluids, secretions, or excretions. Select a gown that is appropriate for the activity and amount of fluid likely to be encountered. Remove a soiled gown as promptly as possible, and wash hands to avoid transfer of microorganisms to other patients or environments.

Only the Association for the Advancement of Medical Instrumentation (AAMI) offers a widely accepted system of classification for protective apparel based on liquid barrier performance.

	LEVEL 1	LEVEL 2	LEVEL 3
AAMI Level / Performance Requirements at 4% AQL	Spray Impact Penetration ≤ 4.5g	Spray Impact Penetration ≤ 1.0g Hydrostatic Pressure ≥ 20cm	Spray Impact Penetration ≤ 1.0g Hydrostatic Pressure ≥ 50cm
Anticipated Risk of Exposure to Fluid	Low	Between Low and Moderate	Moderate
Gown Characteristics (Weight)	Light-weight SMS fabric	Medium-weight SMS fabric	Heavy-weight SMS fabric
Recommended Areas of Use†	Med/Surg Unit Laundry Housekeeping	ICU Med/Surg Unit Dialysis Nursery Lab Pathology Laboratories Hyperbaric	ER Trauma Burn Units Critical Care Units
Recommended Tasks†	Transporting Patients Basic Patient Care	Blood Draw Suturing Inserting I.V. Lines	Drawing Arterial Blood Inserting I.V. Lines

† Recommended areas and tasks are based on feedback from a research panel of 300 Registered Nurses, Infection Control Practitioners, and Materials Managers. Ultimately, the healthcare personnel using these gowns must make the final decision on which level of protection is appropriate, given the anticipated risk of fluid exposure.

UNDERSTANDING ASTM FACE MASK PERFORMANCE LEVELS

Medical face mask materials covered under ASTM specifications are designated as one or more of the following performance levels based on the barrier performance properties of the materials used:

	ASTM LEVEL 1	ASTM LEVEL 2	ASTM LEVEL 3
FLUID RESISTANCE, mmHg	80	120	160
BFE	≥ 95%	≥ 98%	≥ 98%
PFE, @ 0.1 micron	≥ 95%	> 98%	> 98%
DELTA P, mm H₂O/cm²	< 4.0	< 5.0	< 5.0
FLAME SPREAD	Class 1	Class 1	Class 1

WHAT THE TERMS MEAN:

FLUID RESISTANCE* represents the mask’s resistance to penetration by synthetic blood under pressure (mmHg). It measures the ability of a mask’s material construction to minimize fluids from traveling through the material and potentially coming into contact with the wearer. The higher the fluid resistance (filtration), the better the protection.

BFE (Bacterial Filtration Efficiency) represents the percentage of bacteria filtered out at a spore size of 1-5 microns. It is the measure of the efficiency of the mask in filtering bacteria passing through it.

PFE (sub-micron Particulate Filtration Efficiency) represents the percentage of particles filtered out at a spore size of 0.1-1.0 microns. PFE is the measure of the efficiency of the mask in filtering particles passing through it. The size of the particles filtered is critical.

DELTA P (Differential Pressure) represents the pressure drop across the mask or resistance to air flow in mmH₂O/cm². This determines breathing resistance – the higher the Delta P, the less the breathability, but the better the filtration.

FLAME SPREAD measures flame spread of the mask material.

SOURCE: ASTM Standard specification for performance of materials used in medical face masks – F2100-11 Standard. *As specified in Test Method F 1862.

β-LIFTx[®] IS BETTER THAN EVER!

EXCLUSIVE!

EASY TO USE

- Procedure takes 5 minutes
- Formation of translucent, white mask allows for easy observation of uniform application
- Minimized patient discomfort
- Little to no downtime for the patient
- Recommended for use as a series of peels

SAFE

- Requires no neutralization
- Increased safety compared to AHA peels
- Side effects such as mild redness and swelling are only seen in a small percentage of patients
- Regular acne treatment regimens can continue without interruption; patient wait a week before having any additional procedures (e.g., microdermabrasion).
- Can be used on all Fitzpatrick skin types I-VI

Average Physician Fee for Salicylic Acid Peel is \$150-\$250

COMPLETE KIT

β-LIFTx[®] is packaged for a successful patient experience and contains the following:

- 2 alcohol precleanse pads
- A vial of either 20% or 30% salicylic acid in an alcohol solution
- Dispensing cup and applicator sponge
- 1 tube of 0.75 oz. HydroLotion[®] for post-procedure skin
 - Uniquely formulated with special petrolatum fraction to provide deep, long-lasting moisturization
 - Noncomedogenic, hypoallergenic, fragrance, and paraben-free

Each kit is hygienically packed for a single patient use and packed 24 kits per case.

For more information and quarterly specials, visit www.henryschein.com/bliftx

- 2/0** 20% Salicylic Acid Peel Kits 118-7633
- 3/0** 30% Salicylic Acid Peel Kits 118-7632

A versatile, in-office, superficial procedure, packaged in a kit
Safe • Easy to Use • Complete with After Care • Professional Use Only

Microdermabrasion

187-3608

POWERPEEL[®] MICRODERMABRASION SYSTEMS

As the first FDA-cleared device launched in the United States, the PowerPeel[®] is the world leader in the field of microdermabrasion.

Unit comes with enough crystals and tips to treat your first 30 patients. One-year warranty on parts and labor.

Features	Benefits
Patented 45-degree handpiece	Most effective delivery of crystals for the optimum peel with least patient discomfort
Stainless steel and titanium handpiece	Durable and nonbreakable.
FDA cleared since 1993	Longest track record for safety and efficacy
90 mmhg	Strongest machine on the market
Closed loop system	Eliminates any risk of cross contamination
Aluminum oxide system	Less skin irritation than with mechanical abrasion

Don't forget your treatment supplies and accessory products.

Average Physician Fee For Microdermabrasion is \$100-\$150

PowerPeel[®] Aluminum Oxide Crystals
(Each pound of crystals performs 5-6 treatments)

187-0058	2 Lb.	Jar
187-0057	5 Lb.	Jar

PowerPeel[®] Handpiece Tips

187-0069	Small	10/Pkg.
187-0070	Medium	10/Pkg.
187-0071	Large	10/Pkg.

- Each Tip Performs 10-15 Treatments
- Can Be Cold Sterilized Between Patients
- Prevents Cross-Contamination By Designating Tip To Individual Patients

Dukal[®] Premium Wet *- Wipes
(Mildly Scented, Alcohol-Free, Contains Aloe and Lanolin)

933-2268	9" x 13"	64/Pkg.

gel-care® by SILIPOS[®] ADVANCED

Clinically proven Scar Therapy treats scars caused by:

- injury
- burns
- surgery
- post-procedure

471-0006	1.5" Discs	6/Pkg.
471-0005	5" x 6" Sheets	10/Pkg.
471-0010	1.5" Strips	2/Pkg.

Gel-Care® Advanced offers a revolutionary new scar management system that delivers advanced ingredients contained in an enriched sheet. The formula continues to treat the skin even after the sheet is removed.

EXCLUSIVE!

TxSystems AFIRM®

Afirm® is a retinol cream that reduces the appearance of fine lines, making the skin appear smoother and firmer. Afirm delivers the skin-improving benefits of retinol via the unique MICROSPONGE system.

LATISSE™ (bimatoprost solution)-
First and Only Treatment Approved by the FDA for Hypotrichosis of Eyelashes.

Available only through a doctor, LATISSE™ is a once-daily prescription treatment applied to the base of the upper eyelashes with a sterile, single-use-per-eye disposable applicator. LATISSE™ users can expect to experience longer, fuller, and darker eyelashes in as little as eight weeks, with full results in 16 weeks. To maintain effect, continued treatment with LATISSE™ is required. If use of LATISSE™ is discontinued, eyelashes will gradually return to where they were prior to treatment over a period of weeks to months (average eyelash hair cycle).

248-00673mL Bottle

Skin Refining System

70% glycolic acid, pH of 0.6 formulated with the clinically proven, patented anti-irritant Cosmederm-7.

We're solving a big problem with a small solution

REGULATORY CONCERNS ARE AT THE FOREFRONT OF YOUR BUSINESS and there is no greater solution than the CubexRx Mini™ to provide precise accountability and control of controlled substances.

The CubexRx Mini Narcotic Management Solution

- Improves regulatory compliance and pharmacy operations
- Controls access to a single item, decreasing diversion
- Improves profitability by increasing charge capture rates
- Provides detailed information on discrepancies and resolutions
- Protects against unauthorized access
- Reduces staff time associated with narcotic management
- Ability to automate the ordering process

Learn how Cubex can improve your compliance with a FREE inventory assessment

Is your practice still using the old-fashioned paper DEA Form 222 for ordering Schedule II controlled substances?

You can make your practice more efficient by enrolling in Henry Schein's Electronic Schedule II Drug Ordering (e222) System!

With the use of a CSOS (Controlled Substance Ordering System) certificate issued to you by the DEA, you can enroll in e222 and benefit from:

- **Faster Delivery** by immediate receipt of e222 form
- **Increased Order Accuracy**
- **Decreased Paperwork**
- **Ordering Freedom**, enabling you to order any time from any computer with access to your stored CSOS digital certificate

Steps to Enrollment:

1. Enroll with the DEA for a CSOS Certificate*
2. Enroll into Henry Schein's e222
3. Place your e222 order

**Already have a CSOS Certificate? Enrollment will be even faster!*

Enroll Now! Visit www.henryschein.com/e222 for complete enrollment instructions. You may also ask your Sales Consultant or call 800-532-0766 for more details.
