EXPAREL®

(bupivacaine liposome injectable suspension) for Postsurgical Pain Control

Henry Schein is now an authorized distributor for Exparel by Pacira Pharmaceuticals, Inc.

(289-0000) Exparel®
(Bupivacaine Liposome Injectible Suspension),
1.3% 10/Box

For important safety information and to learn more about Exparel, go to:
www.exparel.com/index.shtml

For medical inquiries related to EXPAREL, contact Medical Information at medinfo@pacira.com or 1-855-RX-EXPAREL (1-855-793-9727).

*Pivotal studies have demonstrated the safety and efficacy of EXPAREL in patients undergoing bunionsectomy or hemorrhoidectomy procedures; additional studies are underway to further demonstrate the safety and efficacy in other procedures.

†The clinical benefit of the attendant decrease in opioid consumption was not demonstrated.

¹EXPAREL [prescribing information]. Parsippany, NJ: Pacira Pharmaceuticals, Inc.; 2011.

²Gorfine SR, Onel E, et al. Bupivacaine extended-release liposome injection for prolonged postsurgical analgesia in patients undergoing hemorrhoidectomy: a multicenter, randomized, double-blind, placebo-controlled trial. *Diseases of the Colon & Rectum*. 2011; 54(12):1552-1559.

What is Exparel?

EXPAREL®—Postsurgical Pain Control That Starts When Surgery Ends and Continues Days Into Recovery*

EXPAREL® is a local anesthetic that utilizes bupivacaine in combination with the proven product delivery platform, DepoFoam®. A single intraoperative injection given at the close of surgery delivers postsurgical pain control with reduced opioid requirements¹ for up to 72 hours.*¹

EXPAREL® is the first and only multivesicular liposome-based local anesthetic that can be utilized in the peri- or postsurgical setting in the same fashion as current local anesthetics. Local infiltration of EXPAREL® results in significant systemic plasma levels of bupivacaine that can persist for 96 hours.¹

- Systemic plasma levels of bupivacaine following administration of EXPAREL® are not correlated with local efficacy
- Other formulations of bupivacaine should not be administered within 96 hours following administration of EXPAREL®

EXPAREL® is indicated for administration into the surgical site to produce postsurgical analgesia.¹

The EXPAREL® Difference

Same Infiltration Technique Provides Several Days of Postsurgical Analgesia.* Surgeons who infiltrate local anesthetics can use the same technique to administer EXPAREL® at the close of surgery. As a non-opioid, single-dose analgesic¹, EXPAREL® can:

- Provide up to 72 hours* of analgesia with reduced opioid requirements¹
- Without the need for catheters or pumps

In a pivotal hemorrhoidectomy trial of EXPAREL® compared to placebo, where all patients with inadequate pain control received opioids for rescue pain relief, a single intraoperative injection of EXPAREL® demonstrated:

- A 30% reduction in cumulative pain scores and more pain-free patients at all time points up to and including 24 hours (P<0.0001)²
- A 45% decrease in the use of opioid rescue medication at 72 hours and more than a 12-fold increase in the median time to first opioid use (P=0.0006 and P<0.0001, respectively); the clinical benefit of the attendant decrease in opioid consumption was not determined

EXPAREL® is contraindicated in obstetrical paracervical block anesthesia. EXPAREL® has not been studied for use in patients younger than 18 years of age.
