IMPORTANT PRESCRIBING INFORMATION

Subject: Clarification of dosage and administration instructions for Moderna COVID-19 Vaccine (2023-2024 Formula) for 6 months through 11 years of age

Dear Healthcare Provider:

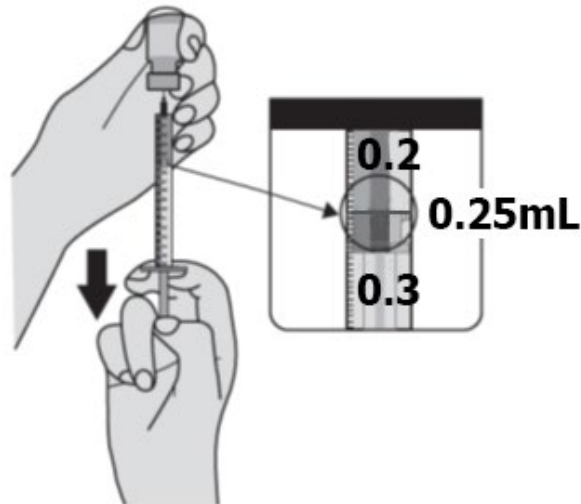

The purpose of this letter is to clarify for vaccination providers the dosage and administration instructions for Moderna COVID-19 Vaccine (2023-2024 Formula) authorized for ages 6 months through 11 years of age.

Moderna COVID-19 Vaccine (2023-2024 Formula) for ages 6 months through 11 years is supplied in single dose vials. A single dose for this age group is 0.25 mL. The single dose vials contain notably more than 0.25 mL of vaccine. Only a single 0.25 mL dose should be withdrawn from the vial. Discard the vial and excess volume after extracting a single dose.

The Dosage and Administration section of the Fact Sheet for Healthcare Providers Administering Vaccine has been updated to clarify that vaccination providers:

- Withdraw a single 0.25 mL dose using a sterile needle and syringe.
- Discard the vial and excess volume after extracting a single dose.

The Dosage and Administration section of the Fact Sheet for Healthcare Providers Administering Vaccine also has been updated to include the graphic below:

For more information, refer to the Fact Sheet for Healthcare Providers Administering Vaccine which is attached to this letter or can be accessed through the website provided below.
