**STANDARD  
OPERATING  
PROCEDURE**

“The CMS ASC Conditions for Coverage mandate specific requirements for emergency management.” Typically, these policies include code blue response, emergency transfer, and crash cart.

Source – CMS

A compliant crash cart is characterized by storing lifesaving equipment that is easily movable and readily accessible into all sides of the cart for quickly viewing and removing equipment and drugs during a crisis situation.

**CRASH CART BEST PRACTICES:**

- Design a standardized crash cart that meets the needs of your facility, the patient population you treat, and procedures you perform
- Review and modify crash cart inventory as required by the anesthesia and medical staff at your facility
- Document necessary approvals for inventory list and emergency management protocols by your Medical Executive Committee and Governing Board
- Establish protocols for emergency response and transfer. **Download A Sample Emergency Crash Cart Checklist from [www.henryschein.com/crashcart](http://www.henryschein.com/crashcart)**
- Designate licensed personnel to perform scheduled inventories of your crash cart supplies for expiration and availability while registering compliance on an approved checklist. **Download A Sample Inventory List from [www.henryschein.com/crashcart](http://www.henryschein.com/crashcart)**
- Ensure functionality, accessibility, and security of all equipment and crash cart supply inventory
- Implement ongoing educational trainings and quarterly drills, while documenting each event

**START WITH THE CART!**

- Quality construction
- Multiple configurations
- 12-year warranty on manufactured parts!
