This user- and patient-friendly impression material features instant and ideal hydrophilicity to produce exceptionally detailed impressions

Like most dentists, Dr. Sean Grady strives for perfection in all his dental procedures, but perfection is especially critical when taking impressions. After all, it's the details in the impression that, in large part, determine the outcome of the restoration. Dentists are challenged to record those details accurately and consistently. While a task that might seem easier said than done, it's entirely possible with the right impression material.

"For years I have been looking for an inexpensive hydrophilic impression material with a good consistency," shared Dr. Grady, who recently found the perfect vinylpolysiloxane impression material in Henry Schein's new VP Mix HP Max Hydro. Formulated to produce maximum detail with instant hydrophilicity, this material has the perfect consistency, captures flawless details, is easy to remove, and has a pleasant taste, Dr. Grady said.

"The light body is flowable but not too runny; the heavy body is firm but not too inflexible; the material does not adhere to or get stuck between the teeth, making it easy to remove from the mouth; the taste and odor are not offensive whatsoever; and the detail captured in the impression material is excellent," described Dr. Grady.

Offered in a range of viscosities and working/setting times, VP Mix HP Max Hydro features maximum tear strength and elasticity to maintain impression integrity during removal and has a pleasant berry scent and flavor to improve the patient experience.

Consistency & Setting Time

VP Mix HP Max Hydro comes in regular and fast-set formulations of extra light body, light body, heavy body, and monophasic, all with high-contrast colors and saturation. "The material worked consistently with every use, whether for the first impression taken with the cartridge or the last,"

said Dr. Nicholas Nicosia, who appreciated the varieties in consistency but suggested more color contrast between the materials. Dr. Kent Caserta liked its "consistency, flowability, and patient acceptance," and Dr. Rupesh Singla, who typically uses fast set, enjoyed the longer working time afforded by the regular set formula but suggested a smaller syringe for deeper access with the light body formula.

When asked what he likes best about VP Mix HP Max Hydro, Dr. Grady replied, "The creamy consistency of the light body allows the material to easily be syringed around prepared teeth without running. The result is a great impression."

Impression Detail

"The detail captured in the impression material is excellent," shared Dr. Grady, who explained, "With most impression materials, there is a 'let's hope it turns out well' mentality while impressing difficult preparations or when there is a lack of total hemostasis. The VP Mix HP Max Hydro eliminates this anxiety because great impressions are the result nearly every time." Dr. Rachna Surana agreed that "it records fine details well" and said she "got consistent results during crown placement appointments

takeaways

- Achieves maximum detail with instant hydrophilicity
- Low contact angle for maximum accuracy of dentition
- Available in regular and fast-set formulations of extra light body, light body, heavy body, and monophasic
- Maximum tear strength and elasticity maintain impression integrity during removal
- Offered in berry, mint, & unflavored varieties

Nicholas Nicosia, DDS
Rochester, NY

"It excelled in mixing, dispensing, setting, and accuracy, and reduced the need to take a second impression."

with minimal to no adjustments needed." Dr. Pauline Lu said it produces "very good impression detail" under the gumline, and Dr. Singla noted, "The extra light body allows for more detailed impressions." Praising the "great visual details," Dr. Oleg Amayev said it was "helpful in all cases in which impressions were used." Noting that he "was able to take an impression of a difficult area with great accuracy and no tears," Dr. Nicosia concluded, "VP Mix HP Max Hydro excelled in mixing, dispensing, setting, and accuracy, and reduced the need to take a second impression."

Patient Experience

"I am very happy to finally have an impression material that performs excellently and is formulated with the patient experience in mind," shared Dr. Rodolfo Olmos. "Patients really appreciate a material with a great smell and a pleasant taste. The patients and I were extremely satisfied with the consistency, quality, and taste and smell of the material." Dr. Amir Noori described VP Mix HP Max Hydro as "by far the best smelling and tasting impression material on the market." Noting that crown seating appointments have been reduced from 45 to 30 minutes with VP Mix HP Max Hydro, Dr. Surana explained, "It saves chair

time and, in turn, makes the whole office schedule work efficiently."

Overall Satisfaction

Calling the material outstanding, Dr. Olmos said, "I was very happy with the results." Having successfully used Henry Schein's polyvinyl impression material for years, Dr. Grady said, "The improvements made with VP Mix HP Max Hydro

are impressive! I am very happy with the resulting impressions from this material. It is the most hydrophilic and well adapting impression material I have used and is now my go-to impression material for crown and bridge and removable prosthetics."
